For Immediate Release

LaserMax Introduces Spartan™ Laser Series: The First Perfect Fit for Handgun Rails

August 25, 2015 (Rochester, NY) — New from LaserMax, the Spartan™ series features a revolutionary mounting system that is easily adapted to achieve ideal placement on handgun accessory rails. Dual electronic touch pads are ample in size and have been elongated to ensure effortless activation with all finger lengths and hand sizes. The Spartan laser will be offered in both red and green variants.

What is so different about Spartan? The handgun accessory market has become increasingly saturated with laser products that offer no true advancements and little versatility. Spartan is different. Harnessing LaserMax's penchant for innovation, the Spartan features revolutionary Rail Vise Technology™ (patent pending) which eliminates the need for multiple laser housing options or clumsy adapters that limit mounting flexibility and can easily end up lost. The fully adjustable nature of the Spartan ensures that the operator can install the sight in its optimal location for personal comfort and ease of use. Once anchored, the sight maintains precision accuracy over extensive live-fire.

Other Features The most versatile and feature-rich rail mounted laser sight ever conceived, Spartan is equipped with LaserMax's patented integral rail feature, enabling attachment of ancillary accessories such as weapon lights or infrared lasers. User programmable for a steady or high-visibility pulsed beam, the Spartan automatically deactivates after 10 minutes to prevent inadvertent power drain. Ambidextrous activation, Rail Vise Positioner™ and simplified windage and elevation tuning set Spartan apart from the fray.

Priced for every shooter's budget, Spartan lasers will begin arriving to retailers in Fall of 2015 at an MSRP of \$99 (red) and \$149 (green). Spartan lasers will maintain LaserMax's 5 year limited warranty.
